Description

Price £879.00

Great images may always start with a good idea, but only FUJINON lenses like XF18mmF1.4 R LM WR can bring those ideas to life in full FUJIFILM color. With a 35mm equivalent focal length of 27mm and a wide, versatile aperture of F1.4, photographers and filmmakers will be compelled to make images that get the most from XF18mmF1.4's remarkable resolving capabilities. Every moment matters, from the ones we find in spontaneous street adventures to the ones we discover in meticulously planned nature excursions. Regardless of the destination, XF18mmF1.4 is the obvious choice for anyone who cares about image quality as much as they do about telling stories.

Distortion-Free Results with Stunning Detail

It takes a lot to design and engineer a wide-angle lens that produces beautifully sharp images from corner to corner, with little-to-no distortion at the frame's edges. XF18mmF1.4 R LM WR accomplishes this difficult task by using 15 lens elements - that also include one ED and three aspherical elements - to minimize optical aberrations. This produces an image that is incredibly sharp and completely true to the story you want to tell.

Fast, Quiet, and Smooth Focus

Bringing images into focus may require a little bit of time and luck every now and then, but they almost always require consistent and reliable autofocus. That's why XF18mmF1.4 R LM WR uses a linear autofocus (AF) motor to provide consistent autofocus results. The first XF wide angle prime lens to use this solution, this precise internal system drives all six focusing elements as one, delivering responsive, near-silent AF down to a minimum object distance of just 7.9in (20cm) in as little as 0.04 seconds.
